Feb 22, 2018 · 4 min read

I recently developed an API with Laravel for a mini-project a couple of friends and I worked on. I decided to build another API but with Lumen instead, since it's a far lighter and faster framework than Laravel.

Lumen is a micro-framework built on top of Laravel's core components.

Lumen utilizes a lot of familiar concepts from Laravel such as Eloquent,

routing, middleware and it's service container. One major advantage
