How to Use Bootstrap 3 Glyphicons

Glyphicons are great! They're one of my favourite additions to native Bootstrap 3. I've been working with these glyphs quite a lot, so I thought I'd make a cheat sheet for myself.

Cheat sheet?

Yeah! To use this cheat sheet, simply find the glyphicon you want to use and click the copy button. This will add the complete HTML code for that glyphicon (span tag and all) to your clipboard, ready to paste into your web development tool of choice.

What are Glyphicons?

Glyphicons are basically little symbols, icons, or pictograms (whatever you prefer to call them) that you can use in a webpage. They're implemented in Bootstrap as an icon font — a custom font that contains these glyphs instead of letters.

If you're creating a site based on Bootstrap 3.3.7, you already have access to all 260

glyphs in the Glyphicons 1.9 set.

Don't know how to set up Bootstrap? Go check out the official [getting started guide](#), or simply just include these two lines in your `<head>` tag:

CSS

```
<link href="//netdna.bootstrapcdn.com/bootstrap/3.3.7/css/bootstrap.min.css" rel="stylesheet">
```

Javascript:

```
<script src="//netdna.bootstrapcdn.com/bootstrap/3.3.7/js/bootstrap.min.js"></script>
```

(Bootstrap hosting very kindly provided by [bootstrapcdn.com](#))

Counterpoint

Icon fonts aren't the only way to implement icons on the web. If you're looking for a explanation of using icon fonts vs. SVG files (another possible method), I'd suggest reading this excellent post by Ian Feather: *Ten reasons we switched from an icon font to SVG.*

Who made them?

The glyphicons you see in Bootstrap are part of a set called *Glyphicons Halflings* and were created by the very talented Jan Kovařík over at [GLYPHICONS](#).

Am I allowed to use them?

Short answer: absolutely! Jan has kindly released them under the [same MIT license as Bootstrap](#). If you'd like more detail, please check out [Jan's licensing page](#).

How do they work?

So, how do I add an icon to my webpage? Well, Glyphicons can be used on the web in one of three ways.

1. HTML Tag

You can use a simple `` tag to place an glyphicon in your page, like this:

```
<span class="glyphicon glyphicon-home"></span> = 
```

- The first class—**glyphicon**—is a base class. It tells the `` tag, "hey, heads

up: this is going to be an icon."

- The second class (in this example, **glyphicon-home**) points the *specific* icon you want to use. This one is an icon of a house!

To use a HTML Tag for an icon, simply copy and paste

```
<i class="glyphicon glyphicon-home"></i>
```

 anywhere within the `<body>` of your page.

Warning: Don't mix glyphicons with other components

Icon classes shouldn't be combined with other elements in Bootstrap. They're designed to be standalone.

2. Unicode HTML Entity

3. CSS Rule

Examples

You can use glyphicons in a variety of ways; in buttons, button groups for a toolbar, navigation or prepended form inputs. Here are a few examples of glyphicons in action:

Buttons

EXAMPLE

```
<button type="button" class="btn btn-default btn-lg">  
  <span class="glyphicon glyphicon-star"></span> Star  
</button>
```

Toolbars

EXAMPLE

```
<div class="btn-toolbar" role="toolbar">  
  <div class="btn-group">  
    <button type="button" class="btn btn-default">  
      <span class="glyphicon glyphicon-align-left"></span>  
    </button>
```

```
<button type="button" class="btn btn-default">
  <span class="glyphicon glyphicon-align-center"></span>
</button>
<button type="button" class="btn btn-default">
  <span class="glyphicon glyphicon-align-right">
    </span>
</button>
<button type="button" class="btn btn-default">
  <span class="glyphicon glyphicon-align-justify">
    </span>
</button>
</div>
</div>
```

Navigation

EXAMPLE

 Home  Shop  About

```
<ul class="nav nav-pills">
  <li>
    <a href="index.html">
      <span class="glyphicon glyphicon-home"></span> Home
    </a>
  </li>
  <li>
    <a href="shop.html">
      <span class="glyphicon glyphicon-shopping-cart"></span> Shop
    </a>
  </li>
  <li>
    <a href="about.html">
      <span class="glyphicon glyphicon-info-sign"></span> About
    </a>
  </li>
</ul>
```

Form Inputs

EXAMPLE

 Email address

 Password

```
<div class="input-group input-group-lg">
```

```
<span class="input-group-addon">
  <span class="glyphicon glyphicon-envelope"></span>
</span>
<input class="form-control" type="text" placeholder="Email address">
</div>
<div class="input-group input-group-lg">
  <span class="input-group-addon">
    <span class="glyphicon glyphicon-lock"></span>
  </span>
  <input class="form-control" type="password" placeholder="Password">
</div>
```
